PROFESSIONAL SUMMARY

I am a product manager with six years of experience building and scaling digital products across fintech, logistics, B2B SaaS, electronic document management and regulated industries.

Today I am growing the service and delivery vertical at a major bank. I own the product side of processes used by thousands of users every month: 40,000+ deliveries nationwide, work with 7,000+ field-service employees and three development teams. I operate at the intersection of strategy, customer experience, operations and product economics: I frame and test hypotheses, analyse funnels and user behaviour with metrics I built into my own products, model unit economics, improve SLAs and look for points of efficiency growth.

I favour a hands-on, entrepreneurial approach to product. Alongside my employed roles I launched and ran my own businesses: I owned P&L, pricing, sales, marketing, customer service and operations - through to a successful exit from one of the projects. This experience helps me see a product not only through metrics and a roadmap, but also through the real value it delivers to the customer, the team and the business.

My engineering background was shaped in part by working on real-time distributed systems in the aerospace industry. Because of it I collaborate confidently with engineering, understand technical constraints and can translate business goals into clear, implementable solutions.

I am especially drawn to products at the intersection of everyday scenarios, service and loyalty.

CORE SKILLS

Product Leadership: Product Strategy · Product Discovery · Roadmapping · Backlog Management · Requirements & User Stories · End-to-End Delivery · Agile/Scrum · Cross-functional Leadership · Stakeholder Management · Product Operations

Analytics & Growth: Product Analytics · SQL · KPI Design · Funnel & Conversion Analysis · Customer Journey Mapping · User Research · Market & Competitor Research · Unit Economics · A/B Testing · Voice of Customer

Domains: FinTech · Digital Logistics & Delivery · Digital Operations · B2B SaaS · Electronic Document Management · Workflow Automation · Regulated Products · Customer Experience

Tools & Technical Fluency: Jira / Confluence · Notion · Figma · SQL · Python · C/C++ · Docker · Git · AI assistants & workflow automation

PROFESSIONAL EXPERIENCE

Alfa-Bank - Director of Product, Service and Delivery Platforms

Russia (remote) | April 2026 - Present

*Runs the product vertical for the bank's service and delivery ecosystem across three domains: product issuance in bank branches, inventory accounting and logistics for physical assets, and courier delivery of banking products to customers. Scale: **40,000+ deliveries per month** nationwide, **7,000+ field-service employees**.*

- Improved conversion to successful handover to **98.3%** in the courier delivery channel and to **92%** in bank branches.
- Leads **three product teams** across these domains, aligning roadmaps, backlogs, priorities and resource allocation between them.
- Owns the outcome metrics - conversion, successful-delivery rate, SLA, NPS/CSAT, handover time - and runs continuous improvement cycles grounded in field data and unit economics.
- Automated a manual cross-selling process in the delivery channel, cutting **~6 minutes** of handling time per sale and removing workload equivalent to **10 FTE**; the approach was adopted by other product teams.
- Launched sales of banking products in branches for non-resident customers, opening a previously unserved segment.

Alfa-Bank - Head of Digital Products, Delivery

Russia | July 2025 - April 2026

Owned digital products for logistics operations and courier delivery of banking products to retail customers, including SIM-card delivery and activation flows for the bank's MVNO offering.

- Reduced SIM-card handover time by **3x** by identifying process bottlenecks and redesigning field operation scenarios.
- Improved successful-delivery conversion by **9%** through a customer journey overhaul and logistics optimisation.

- Increased subscriber activation by **8%** by introducing a new notification mechanism for field-service employees.
- Increased SIM-card handovers by **6%** by launching an issuance flow for customers who were not yet bank clients; also launched SIM issuance with mobile-number portability.
- Developed and defended the 2026 product strategy for the delivery domain, managing teams across two product areas and grounding the conversion roadmap in analytics, UX research and unit-economics work.

Sber - Product Owner, B2B Electronic Document Management Platform

Russia | June 2024 - July 2025

*B2B platform for legally binding electronic document management (EDM) and business-process automation - replacing paper contracts, invoices and regulatory reporting with digital equivalents. **RUB 2.5B annual revenue**; **7,000-8,000 monthly active business customers**, from SMEs to the largest enterprises.*

- Owned the backlog of a cross-functional team of **20+ specialists** (engineering, analytics, design, QA, architecture) and led the Double Diamond process from problem discovery to delivery.
- Ran user, market and competitor research; developed and defended a three-year product strategy for expansion into the external market.
- Initiated and led development of a prototype AI assistant for first-line customer support: ran a 1% traffic pilot to prove the concept, after which the assistant handled **10% of ~12,000 monthly requests** at first touch, reducing agent workload.
- Identified a new market opportunity in everyday document-signing for individuals - healthcare, rental, and similar - assessed its potential and led the market entry process.
- Built the product's unit economics, identified underperforming acquisition channels and cut servicing costs; redesigned onboarding after finding that customer drop-off clustered around specific journey steps.
- Led the full development cycle of a new product from first principles to launch readiness; the initiative was recognised by a Sber Vice President as a potential game changer.

ZNAK Corporation - Product Owner, B2B SaaS and Track & Trace

Russia | December 2022 - June 2024

B2B SaaS and integrated solutions for Russia's state-mandated product labelling programme (CRPT, 'Chestny ZNAK'), which requires every unit of regulated goods to carry a unique traceable digital code. The products let manufacturers and retailers apply, scan and track those codes and stay compliant as the regulation changes.

- Defined the product strategy for the B2B SaaS portfolio and grew average deal value by **19.4% YoY** through a subscription model and portfolio rationalisation.
- Launched **ZNAKCODE**, a new SaaS product that added a standalone revenue stream to the company.
- Cut time-to-market by introducing CI/CD practices - particularly valuable when regulatory deadlines tightened.
- Led the transition to microservices architecture, improving scalability across the product line.
- Built a structured Voice of Customer process and a unified L1-L3 support model; automated the project handoff workflow from initial sale through to ongoing customer support.
- Represented company solutions at CRPT product-labelling conferences and appeared as an industry expert in RBC news coverage.

Ural Civil Aviation Plant - Software Engineer (Qt/C++)

Russia | September 2020 - December 2022

- Developed real-time embedded software for ground-station and antenna-positioning systems, including a distributed client-server architecture over TCP/IP and SNMP for remote monitoring and control.
- Delivered software to **99.9% reliability** requirements in asynchronous, time-critical environments (C/C++, Python, Qt/QML, SQL, Docker, Git) - a background that makes technical conversations with architects and engineers genuinely productive.

FOUNDER & OPERATOR EXPERIENCE

CCO - Private Residential Development

Russia | December 2021 - May 2024 (alongside full-time roles)

- Owned the commercial side of a residential development project: **16 houses** sold across two projects (average area ~240 m², average sale price ~RUB 40M each).
- Sold **six houses within the first three months** of sales, generating **~RUB 230M** in revenue - validating demand well ahead of the original schedule.
- Built the financial model and a per-unit pricing calculator, which made it possible to adjust each house's margin on the fly and actively manage pricing.
- Ran all commercial activity personally - marketing, sales, procurement and financial planning.

Founder / Franchisee - Massage Studio Business

Russia | November 2024 - July 2026 (alongside full-time roles)

- Launched and operated a massage studio that served **7,000+ unique clients** in its first year and reached **top-2 by revenue** in a national franchise network of 70 studios.
- Generated **~RUB 22M** in first-year revenue, grew average customer spend by **20%** and sustained **~60% customer retention**; monthly revenue stayed within ~±15% through 2025-2026.
- Managed a **team of 16**, owning customer experience, local marketing, CRM, scheduling and operations end to end.
- Exited the business, selling the studio in approximately 1.5 months.
- Packaged the operating model into a repeatable playbook: launched a second studio as a turnkey service for a partner, getting it open within a month and profitable within a quarter and a half.

EDUCATION & PROFESSIONAL DEVELOPMENT

- MBA, Product Management - Moscow Business Academy, 2024
- BSc, Computer Science and Engineering - Moscow Aviation Institute (National Research University), 2022
- Customer Experience in Product Management - Sber, 2024
- Project Management - HSE University (Higher School of Economics), 2023
- School 21 (software engineering programme) - Sber, 2021

LANGUAGES: Russian - Native · English - Intermediate (B1), actively improving; practical written English and presentations.
